Work Experience

Gameplay Programmer | Skymap Games | Remote | SEPT 2022 – PRESENT

- Worked on several different projects for varying clients, all in UE5, primarily as programmer (C++, Blueprint) and technical artist (VFX, animation blueprints, blend spaces, etc.)

Unannounced MMO Action Adventure | JUNE 2024 - PRESENT

- Collaborated with design to create & expand functionality for enemy mobs, including AI behavior (UE State Trees), target tracking (blend spaces/aim offsets & ability system), damage type vulnerabilities, etc.
- Leveraged UE's asynchronous task system to improve performance of expensive-at-scale serverside code

Starwave (VR Rhythm Game) | OCT 2023 - JUNE 2024

- Created & improved the majority of VFX in the game using Niagara particle systems & material editor, iterating based on feedback from creative director, art director and designers
- Diagnosed rendering artifacts and graphical performance issues (many exclusive to packaged builds) using RenderDoc & Unreal Insights
- Solved emergency graphics performance issues causing cert fail with imminent deadline, bringing framerate from ~30FPS to target 72FPS in two days time

Path of Titans (Dinosaur Sim MMO) | APR 2023 - OCT 2023

- Extended UE5's Gameplay Ability System to create new functionality for abilities, effects, attributes and damage types, working closely with design to determine goals and anticipate future use cases
- Improved existing animation blueprints, such as blendspaces for swimming creatures to respond to analog directional input
- Owned the Pounce, Latch & Grab system, which allows dinos to attach to one another & was a major feature for an upcoming update. Solved problems related to animation blending, hit detection, replication, actor-actor attachment and detachment, etc.

Multiversus (Platform Fighter) | SEPT 2022 - MAR 2023

- Implemented support for multiple keyboard & gamecube controllers to better facilitate local/tournament play
- Extended UE5's input system to support "keyboard gamepads", using a system that maps keypresses, actions and gamepad inputs to allow gameplay, UI navigation and keybind remapping seamlessly

Intern - Shared Game Engine | Blizzard Entertainment | Remote | JUN 2020 – AUG 2020

- Designed & implemented UI & backend of a client console command system for Blizzard's next-gen AAA game engine
- Exposed ability to listen for console commands to execute associated functionality to their proprietary visual scripting language

Projects

The Camera that Bleeds | "Art Director" | Horror-Mystery Indie Game | JAN 2019 - SEPT 2022

- Directed a nine-person multidisciplinary team on an award-winning indie project built in Unreal Engine
- Supported our team of six 3D artists toward achieving our target "noir graphic novel" aesthetic, giving constructive feedback, writing texturing style guides, creating tiling materials & designing custom in-engine level art tools
- Created custom post-process cel-shading and edge-tracing materials to help us achieve our desired aesthetic

Education

Rochester Institute of Technology | Bachelors of Science, Game Design & Development
